Project 1

For this project you will be creating your own version of the "cat" and "grep" command on Linux systems using the C programming language. Follow the instructions at https://github.com/remzi-arpacidusseau/ostep-projects/tree/master/initial-utilities for this project. You may ignore the portions on "zip" and "unzip" as that is not part of *this* assignment.

Assigned: Thursday, September 6, 2018

Due: Thursday, September 20, 2018 at 11:59pm

NB: Make sure your final work is in your GitHub/bitbucket account by the time it is due. The work will be downloaded from there for grading.
